

# PORTFOLIO

Manufacturer of  
Standard and Customised  
Activated Carbon Media  
and Activated Carbon Filters

# MINIMISING POLLUTANTS

Cocarb Solution, part of the Danish Longhi Group, is specialised in producing superior quality steam activated carbon and activated carbon filters. We have full focus on competitive pricing and the highest possible degree of ECO-friendliness within all our product lines.

Main production takes place in Indonesia with integrated development and manufacturing of both activated carbon and filters. The synergy between these two sides of production ensures that we have full control of every aspect within the process.

One of our strengths is that we can produce special, customised filters in smaller batches. We can do private label on demand, and we offer several types of standard filters.

Our distributors and agents are available in Europe, Asia-Pacific, the Middle East and America.

# OUR VISION, MISSION AND VALUES

*The Foundation of All Our Activated Carbon Products*

## Vision

To be world leader of high-quality specialised filtration products.

## Mission

We develop, manufacture and supply high-quality standard and customised activated carbon media and activated carbon filters.

## Values

- **Quality**  
Raw materials – Craftsmanship – Safety – Testing and Certification
- **Innovation**  
Modularity - Flexibility – Customisation
- **Design**  
Form and Function – Adding a Visual Edge – Usability
- **People**  
Skills – Teamwork – Synergy
- **Environment**  
Eco- and People Friendliness – Sustainability – CSR
- **Professionalism**  
Process – Elasticity – Integrity

# STEAM ACTIVATED CARBON

*Steam Activated Carbon Media without Chemicals.  
A Natural Resource Used to Achieve a Cleaner Environment*

We supply a variety of wood, coal and coconut shell standard and customised grades of steam activated carbon for different applications.

Most of our carbon is produced in our Indonesian factories from naturally grown coconut shells. These are not only superior for adsorption of pollutants due to their extremely high porosity, but also by far the eco-friendliest raw material for activated carbon.

ACTIVATED CARBON

*Our steam activated carbon comes from wood, coal and primarily coconut shells.  
Its final form can be as powder, granulate or pellets.*

# ACTIVATED CARBON FILTERS

*Standard and Customised Filters for a Variety of Both Air/Gas and Liquid Phase Applications*

## Standard and Customised

We produce a variety of durable standard-sized cylinder and box filters, high performance in-line filters and customised filters for various applications.

As a manufacturer of both activated carbon media and filters we fully control the quality of the activated carbon media used in our filters, and we customise it to the filters' specific use.

We supply the most commonly used filters as standard and always have a stock of these available. However, our specialty is manufacturing customised filters according to the specifications of our customers.

### ALL FILTER TYPES

*Our specialty is design and manufacturing of customised specialty filters.*

# OUR PRIMARY MARKETS

*We Supply Activated Carbon to a Variety of Segments Globally*

## Activated Carbon

- Air and Gas
- Water
- Gold
- Petroleum and Gas
- Food and Beverage
- Chemicals

## Standard and Customised Filters

- Industry
- Water Purification Plants and Systems
- Food and Beverage
- Airports
- Buildings, Hotels and Malls
- Filter Unit Manufacturers

# GLOBAL LOCATIONS

- DENMARK
- POLAND
- SINGAPORE
- INDONESIA
- UNITED ARAB EMIRATES

- Global Network of Distributors and Agents
